

## LANC125.1W12

## DC/DC Converter 9-18 VDC Input 5.1 VDC Output at 2.4A

#### **Applications:**

- Distributed Power Architectures
- Communications Equipment
- Computer Equipment
- Work Stations

#### **Features:**

- RoHS Compliant
- Single Output
- Standard 24 Pin DIP and SMT Package
- Five-Sided Continuous Shield
- No Minimum Load Required
- High Power Density
- High Efficiency up to 88%
- Small Size: 1.25 x 0.8 x 0.450 Inches
- Input to Output Isolation (1600VDC)
- 2:1 Wide Input Voltage Range
- Fixed Switching Frequency
- Input Under-Voltage Protection
- Output Over-Voltage Protection
- Over-Current Protection
- Output Short Circuit Protection
- Remote ON/OFF

#### **Description:**

The LANCW12 single output series offers 12 watts of output power from a package in an IC compatible 24pin DIP and SMT configuration. LANCW12 single output series has 2:1 wide input voltage of 9-18VDC, 18-36VDC, and 36-75VDC. The LANCW12 single output series features 1600VDC of isolation, short circuit protection and five sided shielding. All models are particularly suited for telecommunications, industrial, mobile telecom, and test equipment applications.

#### **DESIGN CONSIDERATIONS:**

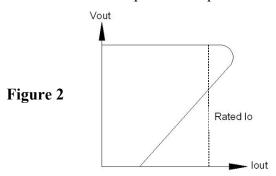

#### **Output Over Current Protection**

When excessive output currents occur in the system, circuit protection is required on all power supplies. Normally, overload current is maintained at approximately 150% of rated current for the LANCW12 single output series.

Fold back-mode is a method of operation in a power supply whose purpose is to protect the power supply from being damaged during an over-current fault condition. It also enables the power supply to operate normally when the fault is removed.

One of the problems resulting from over current is that excessive heat may be generated in power devices; especially MOSFET and Schottky diodes and the temperature of those devices may exceed their specified limits. A protection mechanism has to be used to prevent those power devices from being damaged.

The operation of fold back is as follows. When the current sense circuit sees an over-current event, the output voltage of the module will be decreased for low power dissipation and decrease the heat of the module.

#### **Output Over Voltage Protection**

The output over-voltage protection consists of an output Zener diode that monitors the voltage on the output terminals. If the voltage on the output terminals exceeds the over-voltage protection threshold, then the Zener diode clamps the output voltage.

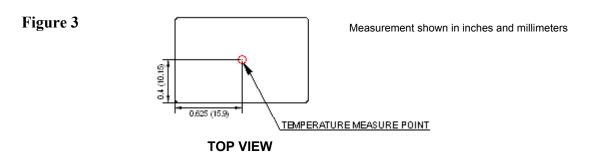

#### **Input Source Impedance**

The power module should be connected to a low impedance input source. Highly inductive source impedance can affect the stability of the power module. Input external L-C filter is recommended to minimize input reflected ripple current. The inductor is simulated source impedance of  $12\mu H$  and capacitor is Nippon chemi-con KZE series  $47\mu F/100V$ . The capacitor must as close as possible to the input terminals of the power module for lower impedance.

#### **Thermal Consideration**

The power module operates in a variety of thermal environments. However, sufficient cooling should be provided to help ensure reliable operation of the unit. Heat is removed by conduction, convention, and radiation to the surrounding environment. Proper cooling can be verified by measuring the point as the figure below. The temperature at this location should not exceed 105°C. When operating, adequate cooling must be provided to maintain the test point temperature at or below 105°C. Although the maximum point temperature of the power modules is 105°C, you can limit this temperature to a lower value for extremely high reliability.

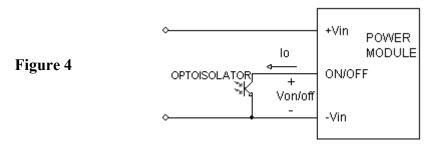

#### Remote ON/OFF Control

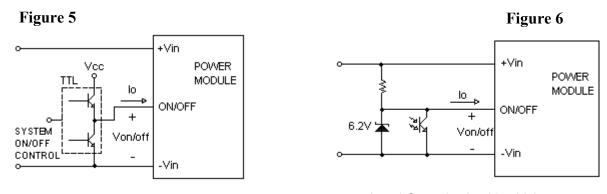

The positive logic remote ON/OFF control circuit is included.

Turns the module ON during a logic High on the On/Off pin and turns OFF during a logic Low. The On/Off pin is an open collector/drain logic input signal (Von/off) that's referenced to GND. If not using the Remote On/Off feature, please open circuit between on/off pin and –input pin to turn the module on.

## TECHNICAL DATASHEET LANC125.1W12

#### **Soldering and Reflow Considerations:**

#### Lead Free Wave Solder Profile for DIP Type

Reference Solder: Sn-Ag-Cu; Sn-Cu

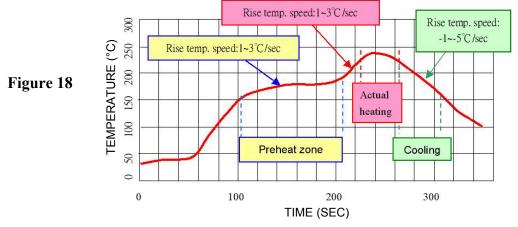

Hand Welding:

Soldering Iron: Power 90W Welding Time: 2~4 sec Temp: 380~400°C

| 0 |  |
|---|--|
| 0 |  |

| Zone    | Reference Parameter             |
|---------|---------------------------------|
| Preheat | Rise temp. speed: 3°C/sec max.  |
| Zone    | Preheat temp: 100~130°C         |
| Actual  | Peak temp: 250~260°C            |
| Heating | Peak time (T1+T2 time): 4~6 sec |

#### Lead free reflow profile for SMT type

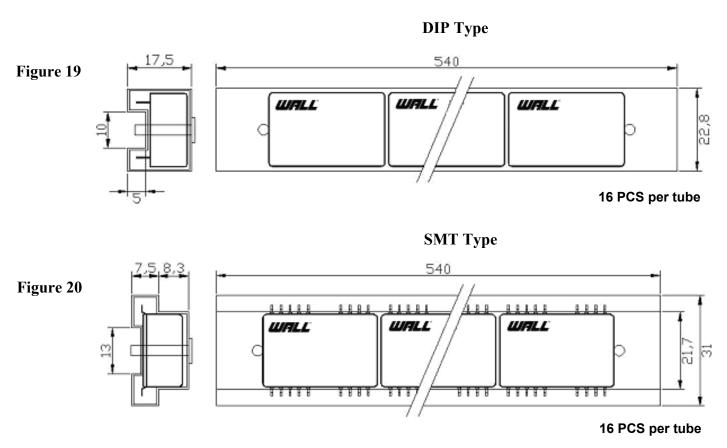

**Reference Parameter** Zone Rise temp. speed: 1~3°C/sec Preheat Preheat time: 60~120sec Zone Preheat temp.155~185°C Rise temp. speed: 1~3°C/sec Melting time: 30~60 sec Actual Melting temp: 217°C Heating Peak temp: 230~240°C Peak time: 10~20 sec Cooling Rise temp. speed: -1~ -5°C/sec

Reference Solder: Sn-Ag-Cu; Sn-Cu

LANC125.1W12

#### **Packaging Information:**

#### **Safety and Installation Instruction:**

#### **Fusing Consideration**

Caution: This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture. To maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse. The safety agencies require a normal-blow fuse with maximum rating of 3A. Based on the information provided in this data sheet on Inrush energy and maximum DC input current; the same type of fuse with lower rating can be used. Refer to the fuse manufacturer's data for further information.

#### MTBF and Reliability

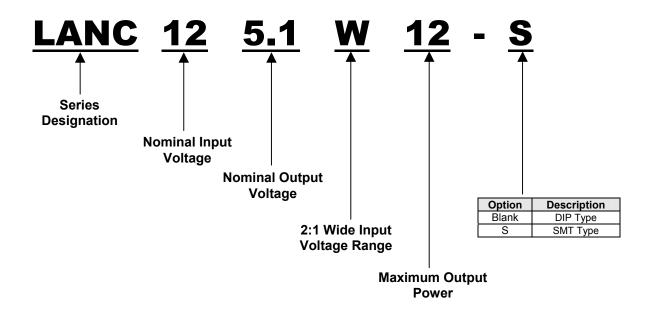

The MTBF of the LANCW12 single output series of DC/DC converters has been calculated using Bellcore TR-NWT-000332 Case I: 50% stress, Operating Temperature at 40°C (Ground fixed and controlled environment). The resulting figure for MTBF is  $2.75 \times 10^6$  hours.

MIL-HDBK 217F NOTICE2 FULL LOAD, Operating Temperature at 25°C. The resulting figure for MTBF is  $1.078 \times 10^6$  hours.

#### **Ordering Information:**

Part Number Example:

#### **Company Information:**

Wall Industries, Inc. has created custom and modified units for over 40 years. Our in-house research and development engineers will provide a solution that exceeds your performance requirements on-time and on budget. Our ISO9001-2000 certification is just one example of our commitment to producing a high quality, well documented product for our customers.

Our past projects demonstrate our commitment to you, our customer. Wall Industries, Inc. has a reputation for working closely with its customers to ensure each solution meets or exceeds form, fit and function requirements. We will continue to provide ongoing support for your project above and beyond the design and production phases. Give us a call today to discuss your future projects.

#### Contact Wall Industries for further information:
