

Size:
1.00 x 1.00 x 0.39 inches
(25.4 x 25.4 x 9.9 mm)

Options

- Negative Logic Remote ON/OFF
- Without Trim pin
- Without CTRL Pin
- Heatsink

FEATURES

- High Efficiency up to 92%
- Remote ON/OFF Control
- 4:1 Wide Input Voltage Ranges
- Six-Sided Continuous Shielding
- Ultra Low Quiescent Current
- No Minimum Load Requirements
- Single and Dual Outputs
- 30 Watts Maximum Output Power
- 1600VDC I/O Isolation
- Short Circuit, Over Voltage, Over Load, & Over Temp. Protection
- Wide Operating Temperature Range: -40°C to +100°C
- Compliant to RoHS & Reach
- UL60950-1, EN60950-1, & IEC60950-1 Safety Approvals
- Optional Heatsink Available (Suffix "HC")

DESCRIPTION

The JFCW30 series of DC/DC power converters provides 30 Watts of output power in an industry standard 1.00" x 1.00" x 0.39" package and footprint. This series has single and dual output models with 4:1 wide input voltage ranges of 9-36VDC and 18-75VDC. Some features include high efficiency up to 92%, 1600VDC I/O isolation, six-sided shielding, and remote ON/OFF control. These converters are also protected against short circuit, over load, over voltage, and over temperature conditions. All models are RoHS compliant and have UL60950-1, EN60950-1, and IEC60950-1 safety approvals. This series is best suited for use in wireless networks, industry control systems, telecom/datacom, and semiconductor equipment.

NOTES

- Trimming allows the user to increase or decrease the output voltage set point of the module. This is accomplished by connecting an external resistor between the TRIM pin and either the +Vout pin or the –Vout pin.
 - The JFCW30 series can only meet EMI Class A or Class B with external components added. See page 5 for more details.
 - An external input filter capacitor is required if the module has to meet EN61000-4-4, EN61000-4-5.
-For 24VDC nominal input models we recommend connecting an aluminum electrolytic capacitor (Nippon chemi-con KY series, 220µF/100V) and a TVS (SMDJ58A, 58V, 3000 Watt peak pulse power) diode in parallel.
- For 48VDC nominal input models we recommend an aluminum electrolytic capacitor (Nippon chemi-con KY series, 220µF/100V).
 - Both positive logic and negative logic remote ON/OFF control is available. Positive logic remote ON/OFF comes standard; for negative logic remote ON/OFF add the suffix “R” to the model number (Ex: JFCW24S05-30R).
 - There are several different options available for this series. Please see the “Model Number Setup” on page 5 for all options and ordering information.
 - Optional heatsink is available. Please call factory for more information.
 - UL approval can be added to any products not currently listed if required.
- CAUTION:** This power module is not internally fused. An input line fuse must always be used.
- Due to advances in technology, specifications subject to change without notice.*

COMMON MODE CHOKES

PMT-070

Inductance: 10μH±20% Unit: mm
Impedance: 40mΩ
Rated Current: 2.6A

PMT-097

Inductance: 2.2μH±20% Unit: mm
Impedance: 12mΩ
Rated Current: 11A

FUSE CONSIDERATIONS

This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operations to an integrated part of sophisticated power architecture.

To maximum flexibility, internal fusing is not included; however to achieve maximum safety and system protection, always use an input line fuse.

The suggested input line fuse is:

Model	Fuse Rating (A)	Fuse Type
24VDC Nominal Input Models	6A	Slow-Blow
48VDC Nominal Input Models	2A	Slow-Blow

The table is based on information provided in the data sheet on inrush energy and maximum DC input current at low Vin.

THERMAL CONSIDERATIONS

This power module operates in a variety of thermal environments.

However, sufficient cooling should be provided to help ensure reliable operation of the unit.

Heat is removed by conduction, convection, and radiation to the surrounding environment.

Proper cooling can be verified by measuring the point as shown in the figure below.

The temperature at this location should not exceed 105°C.

When operating, adequate cooling must be provided to maintain the test point temperature at or below 105°C.

Although the maximum point temperature of the power modules is 105°F, you can limit this temperature to a lower value for extremely high reliability.

Thermal test condition with vertical direction by natural convection (20LFM).

OUTPUT VOLTAGE ADJUSTMENT

Output voltage set point adjustment allows the user to increase or decrease the output voltage set point of the module. This is accomplished by connecting an external resistor between the Trim pin and either the +Output or –Output pins.

With external resistor between the Trim and –Output pin, the output voltage set increases.

With an external resistor between the Trim and +Output pin, the output voltage set point decreases.

The external Trim resistor needs to be at least 1/16W of rated power.

Trim Up Equation

$$R_U = \left[\frac{G \times L}{(V_{O,up} - L - K)} - H \right] \Omega$$

Trim Down Equation

$$R_D = \left[\frac{(V_{O,down} - L) \times G}{(V_o - V_{O,down})} - H \right] \Omega$$

COMPANY INFORMATION

Wall Industries, Inc. has created custom and modified units for over 50 years. Our in-house research and development engineers will provide a solution that exceeds your performance requirements on-time and on budget. Our ISO9001: 2015 certification is just one example of our commitment to producing a high quality, well-documented product for our customers.

Our past projects demonstrate our commitment to you, our customer. Wall Industries, Inc. has a reputation for working closely with its customers to ensure each solution meets or exceeds form, fit and function requirements. We will continue to provide ongoing support for your project above and beyond the design and production phases. Give us a call today to discuss your future projects.
